

Claims

What is claimed is:

1. A static absorbing material formed in a manner to conform to the shape of the handle are of fuel dispensing nozzles.
2. The static absorbing device claimed in claim 1, wherein material is bound together by a section of two-sided conductive material resulting in a secured and grounded object.
3. The static absorbing device claimed in claim 1, wherein material is bound together by a section of either two-sided adhesive strip or by an adhesive compound to a semicircular tube form extending entire length of handle section of fuel nozzle.
4. The static absorbing device claimed in claim 1, wherein a one-sided adhesive strip is secured over each area where static eliminating material is joined together providing extra adhesion and protection to joined material.
